Response to Amendment

1. The amendment filed 05/08/2006 has been entered.

Drawings

2. The drawings were received on 05/08/2006. These drawings are accepted.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. Claims 1-10 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by Allen et al. ("Real-time analysis of rhythmic gene expression in immortalized suprachiasmatic nucleus cells").

Allen discloses an apparatus and program for measuring and analyzing bioluminescence, the apparatus comprising: a receiving means to receive luminescence measurement result groups in real-time from a sample group of organisms and sorting them as time series data, a displaying and maintaining means to display and maintain in real-time the luminescence measurement results. Allen discloses that the luminescence measurement results are stored and compared to each other. Allen also discloses an analyzing means to analyze the rhythm of the luminescence measurements and a

screening means. The results are analyzed and outputted. See especially Fig.2 and corresponding description.

Allowable Subject Matter

5. Claims 11-22 are allowed.
6. The following is a statement of reasons for the indication of allowable subject matter: The amendment made by the Applicant to include the limitation that the system includes a measurement controlling means to output a control signal for receiving the luminescence measurement results, which controlling means is separate from the receiving means, overcomes the prior art cited against the claims.
